

Introduction to Artificial Intelligence

CSCI 250 · Fall 2026 · 4 Units · Online

Now with deep, hands-on coverage of Large Language Models, Generative AI & AI-assisted coding.

Artificial Intelligence is the defining technology of the decade — and generative AI has put it in everyone's hands. In this project-based, beginner-friendly course you'll go from the fundamentals of machine learning to building and deploying your own AI applications using the same tools professionals use today. No expensive textbook and no costly hardware — everything runs free in your browser.

What you'll build & learn

- ▶ ML & neural-network foundations in Python
- ▶ How LLMs really work — build a tokenizer and attention from scratch
- ▶ Prompt engineering & reasoning
- ▶ Retrieval-Augmented Generation (RAG) over your own data
- ▶ AI agents & tool use (Model Context Protocol)
- ▶ AI-assisted coding with Claude Code
- ▶ Multimodal AI, fine-tuning & evaluation
- ▶ Capstone: build & deploy your own AI assistant

100% Online

Asynchronous

\$0 Textbook Cost

Hands-on Projects

Portfolio Capstone

Tools you'll use: Anthropic Claude · Claude Code · Google Gemini · Hugging Face · Ollama

Instructor: Gheni Abia · gabla@palomar.edu

Prerequisite: CSCI 114 (grade of "C" or better)

Format: Online, fully asynchronous
