

CSCI 250– Fall, 2021

Introduction to Artificial Intelligence

The most important and exciting technology breakthroughs in this decade are happening in the field of Artificial Intelligence! The rise of AI is bringing fundamental changes to every aspect of society, such as transportation, manufacturing, healthcare, education, communication, and many more... According to Forbes, the demand for AI skilled workers has been grown 450% since the year of 2013, yet there is not enough workforce to fill the demand. According to Wall Street Journal, the current demand for AI talent is so high that they became one of the highest paid workers of all time – annually \$200K average. **This college course will introduce you to the field of AI and help you to take the first steps of becoming AI practitioner.**

It includes lectures, hands-on coding and discussions:

- Introduction to AI principles, machine learning (ML), deep learning, neural networks, and data science
- Popular AI algorithms and AI applications: Self Driving Cars, Natural Language Understanding
- AI/ML tools and software eco-system
- The current state of art in AI and AI Strategies for industry
- The power and limits of AI

Instructor: Gheni Abia (gabla@palomar.edu)

Schedule: Asynchronous Online

College: Palomar College
